**Genomind**

Scientists have discovered specific genetic variations that modify the body's response to certain drugs and therapies. By identifying these variations, clinicians can design a treatment plan optimized for an individual patient. This new development is known as "personalized medicine."

To learn more about the specific genetic variations tested and the science behind the testing, **click here**.

Genomind will submit to insurance.  For more information about billing and how much you may owe based on your insurance, **click here**.

If considered medically necessary, this test is covered by traditional Medicare.
