trio-smart SIBO Breath Test

SIBO stands for Small Intestinal Bacterial Overgrowth. The trio-smart breath test measures the levels of hydrogen, methane, and hydrogen sulfide in the breath of patients after lactulose or glucose consumption.

trio-smart provides the complete profile of the primary fermented gases in the microbiome and is the only clinical breath test to measure hydrogen sulfide in addition to hydrogen and methane. trio-smart measurement is precise and reliable.

The maximum patient responsibility for commercial insurance including Managed Medicare plans is $349. The test is covered in part by most insurance plans.

The CPT (procedure) code billed is 91065.

Patients should contact their insurance plan to confirm coverage and reimbursement.

Patients can also pay upfront and submit a receipt to their out-of-network deductible.

This test is covered at no cost for Medicare and Medicaid patients.
